Radiometrix
UHF FM Data Transmitter and Receiver Modules

The TX2 and RX2 data link modules are a miniature PCB mounting UHF radio transmitter and receiver pair which enable the simple implementation of a data link at upto 40 kbit/s at distances upto 75 metres in-building and 300 metres open ground.

left: TX2 transmitter   *right:RX2 receiver*

Features:
- EMC conforms to ETS 300-683
- Type Approved to ETS 300-220
- Data rates to 40 kbps
- Usable range to 300 m
- 418 & 433.92 MHz versions.
- Fully screened

Available for operation at 433.92 MHz in Europe, 418.00 MHz and 433.92 MHz in the U.K., both modules combine full screening with extensive internal filtering to ensure EMC compliance by minimising spurious radiations and susceptibilities. The TX2 and RX2 modules will suit one-to-one and multi-node wireless links in applications including car and building security, EPOS and inventory tracking, remote industrial process monitoring and computer networking. Because of their small size and low power requirements, both modules are ideal for use in portable, battery-powered applications such as hand-held terminals.

Transmitter - TX2
- 2 stage SAW controlled, FM modulated at upto 40 kbps
- Operation from 2.2V to 6V
- +9dBm on 433.92MHz (Europe & UK) , -6dBm on 418MHz (UK)
- High efficiency, >15%, DC→ RF
- Improved frequency and deviation accuracy
- 2nd harmonic, < -60dBc

Receiver - RX2
- Double conversion FM superhet
- SAW front end filter, image rejection 50dB
- Supply 3.0V to 6.0V @ 13mA
- 40kbps, -F version , -100 dBm sensitivity @ 1ppm BER
- 14kbps. -A version , -107 dBm sensitivity @ 1ppm BER
- LO leakage, < -60 dBm

Functional description:

The TX2 transmitter module is a two stage, SAW controlled FM transmitter operating between 2V and 6V and is available in 433.92MHz and 418.00 MHz versions. The 433.92 MHz unit is type-approved to ETS 300-220 for European use and delivers nominally +9dBm from a 5V supply at 12mA, while the 418.00 MHz unit has MPT 1340 type-approval for U.K. use and delivers -3dBm from a 5V supply at 5mA. Both modules measure 12 x 32 x 3.8 mm.

The RX2 module is a double conversion FM superhet receiver capable of handling date rates of upto 40kbit/s. The SIL style RX2 receiver measures 17.5 x 48 x 4.5 mm. It will operate from a supply of 3-6V and draws 14mA when receiving. A fast-acting carrier detect and a power-up enable time of less than 1ms This allows effective duty cycle power saving and a -107 dBm sensitivity. This, combined with a SAW front-end filter results in an excellent RF performance and EMC conformance.
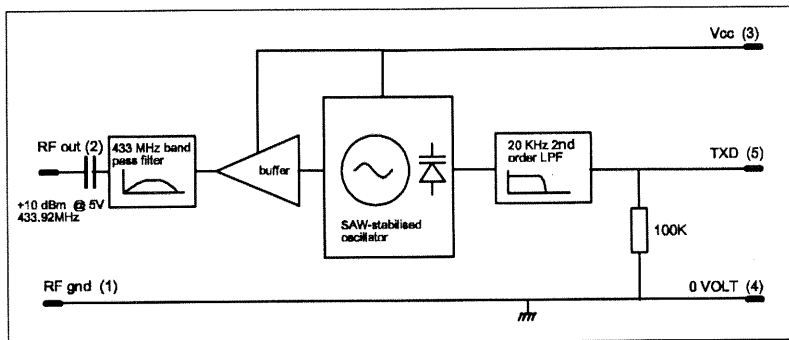

TX2 transmitter:

fig. 1: TX2 block diagram

Pin description:

RF GND   *(pin 1)*
RF ground pin, internally connected to the module screen and pin 4 (0V). This pin should be connected to the RF return path (e.g. coax braid, main PCB ground plane etc.)

RF out   *(pin 2)*
50Ω RF output to the antenna, it is DC isolated internally. (see antenna section of TX2 applications note for suggested antenna/feeds).

fig.2: physical dimensions

Vcc   *(pin 3)*
+ve supply pin. The module will generate RF when the Vcc supply is present. Max ripple content 0.1Vp-p. A 100nF de-coupling ceramic capacitor is suggested.

0V   *(pin 4)*
Supply ground connection, connected to pin 1 and screen.

TXD   *(pin 5)*
This DC coupled modulation input will accept either serial digital data (0V to Vcc levels) or high level linear signals. see TX2 applications note for suggested drive methods. Input impedance is 100kΩ.
RX2 receiver:

fig. 3: RX2 block diagram

Pin description

RF in *(pin 1)*
50Ω RF input from the antenna, it is DC isolate internally. (see antenna section of RX2 applications note for suggested antenna/feeds).

RF GND *(pin 2)*
RF ground pin, internally connected to the module screen and pin 4 (0V). This pin should be connected to the RF return path (e.g. coax braid, main PCB ground plane etc.)

fig. 4: physical dimensions

1 = RF in
2 = RF gnd
3 = CD
4 = 0V
5 = Vcc
6 = AF
7 = RXD

CD *(pin 3)*
The Carrier Detect may be used to drive an external PNP transistor to obtain a logic level carrier detect signal, see test circuit / applications note. If not required it should be connected to pin 5 (Vcc).

0volt *(pin 4)*
Supply ground connection, connected to pin 1 and screen.

Vcc *(pin 5)*
+ve supply pin. +3.0V to +6.0V @ <17mA . The supply must be clean < 2mV$_{P-P}$ ripple. A 10μF de-coupling capacitor and 10Ω series resistor is recommended if a clean supply is not available.

AF *(pin 6)*
This is a buffered and filtered analogue output from the FM demodulator. It has a standing DC bias of 1.2V and 400mV $_{P-P}$ base band signal. It is useful as a test point or to drive linear decoders. Load impedance should be > 2kΩ and < 100pF.

RXD *(pin 7)*
This digital output from the internal data slicer is a squared version of the signal on pin 6 (AF). It may be used to drive external decoders. The data is true data, i.e. as fed to the transmitter. Load impedance should be > 1kΩ and < 1nF
Survival Maximums:

Operating temperature: -10°C to +55°C
Storage temperature :   -40°C to +100°C

TX2, all variants
Vcc (pin 3)   -0.1V to +10.0V
Data input (pin 5)   -0.1V to +10.0V
RF out (pin 2)   ±50V @ < 10MHz , +20dBm @ > 10MHz

RX2, all variants
Vcc (pin 5)   -0.1V to +10.0V
Data , CD & AF (pin 7,3,6)   -0.1V to + Vcc V
RF input (pin 1)   ±50V @ < 10MHz , +13dBm @ > 10MHz

note: Operation of the TX2 above 6V may cause the module to exceed the licensed power level.

Module test circuits

fig.5: TX2 test circuit

fig.6: RX2 test circuit

* The PNP transistor enables a CMOS compatible Carrier Detect signal to be derived from pin 3. If no CD signal required pin 3 should be connected directly to pin 5 (Vcc)

Module mounting considerations

The modules may be mounted horizontally or vertically on an area of ground plane preferably close to the antenna to minimise feed length. The receiver and it's antenna should be kept away from sources of interference (micro's, SMPS etc.). The modules may be potted if required in a viscous compound which can not enter the screen can..
Warning: Do NOT wash the modules. They are not hermetically sealed.

fig. 7: module mounting options

Antenna requirements

Three types of integral antenna are recommended and approved for use with the module:

A) *Helical* Wire coil, connected directly to pin 2, open circuit at other end. This antenna is very efficient given it's small size (20mm x 4mm dia.). The helical is a high Q antenna, trim the wire length or expand the coil for optimum results. The helical de-tunes badly with proximity to other conductive objects.

B) *Loop* A loop of PCB track tuned by a fixed or variable capacitor to ground at the 'hot' end and fed from pin 2 at a point 20% from the ground end. Loops have high immunity to proximity de-tuning.

C) *Whip* This is a wire, rod, PCB track or combination connected directly to pin 2 of the module. Optimum total length is 17cm (1/4 wave @ 418MHz) Keep the open circuit (hot) end well away from metal components to prevent serious de-tuning. Whips are ground plane sensitive and will benefit from internal 1/4 wave earthed radial(s) if the product is small and plastic cased

	A helical	B loop	C whip
Ultimate performance	**	*	***
Easy of design set-up	**	*	***
Size	***	**	*
Immunity proximity effects	**	***	*
Range open ground to similar antenna (for TX2-433-A & RX2-433-A)	200m	100m	300m

Antenna selection chart

The antenna choice and position directly controls the system range. Keep it clear of other metal in the system, particularly the 'hot' end. The best position by far, is sticking out the top of the product. This is often not desirable for practical/ergonomic reasons thus a compromise may need to be reached. If an internal antenna must be used try to keep it away from other metal components, particularly large ones like transformers, batteries and PCB tracks/earth plane. The space around the antenna is as important as the antenna itself.

A. Helical antenna

0.5 mm enameled copper wire
close wound on 3.2 mm diameter former

418 MHz = 26 turns
433 MHz = 24 turns

B. Loop antenna

feed point 15% to 25% of total loop length

track width = 1mm

4 to 10 cm² inside area

capacitor = 1.5 to 5 pF variable or fixed

C. Whip antenna

16.5cm

wire, rod, PCB-track or a combination of these three

418 MHz = 16.5 cm total from antenna pin 2.
433 MHz = 15.5 cm total from antenna pin 2.

Fig.8: antenna configurations

Type Approval in UK

The TX2-418 is type approved in the UK to MPT1340 for use in Telemetry, Telecommand and In-Building alarm applications.

CONFORMANCE to MPT1340 REQUIRES THAT:

1. The transmitting antenna must be one of the 3 variants given in the data sheet. Antenna structures which yield ERP gain are not permitted.
2. The module must be directly and permanently connected to the transmitting antenna without the use of an external feeder. Increasing the RF power level by any means is not permitted.
3. The module must not be modified nor used outside it's specification limits.
4. The module may only be used to send digital or digitised data. Speech and/or music are not permitted.
5. The equipment in which the module is used *must* carry an inspection mark located on the outside of the equipment and be clearly visible. The minimum dimensions of the inspection mark shall be 10 x 15 mm and the letter and figure height must be no less than 2mm. The wording shall read:

> RTD: xxxxxx
> SRD-MPT1340-GB

6. Products intended for UK commercial application must be notified to the Radiocommunications Agency (RA) on form RA 249 (Cat I), obtainable from the RA's library service, Tel 0171 211 0502 / 0505

OEM Manufacturers incorporating the TX2 as a component part of their product are authorised by Radiometrix Ltd to quote our type-approval provided all the above conditions are complied with.

European type approval

The TX2-433 & RX2-433 are type approved to ETS 300-220 for European use.

CONFORMANCE to ETS 300-220 REQUIRES THAT:

1. The transmitting antenna must be one of the 3 variants given in the data sheet. Antenna structures which yield ERP gain are not permitted.
2. The module must be directly and permanently connected to the transmitting antenna without the use of an external feeder. Increasing the RF power level by any means is not permitted.
3. The module must not be modified nor used outside it's specification limits.
4. The equipment in which the module is used *must* carry an inspection mark located on the outside of the equipment and be clearly visible. The minimum dimensions of the inspection mark shall be 10 x 15 mm and the letter and figure height must be no less than 2mm. The wording shall read:

> Radiometrix
> TX2-433
> CEPT-LPD-xx

respectively,

> Radiometrix
> RX2-433
> CEPT-LPD-xx

5. It is not recommended to transmit carrier only. In Germany transmission may not be initiated without modulation.

OEM Manufacturers incorporating the TX2 & RX2 as a component part of their product are authorised by Radiometrix Ltd to quote our type-approval provided all the above conditions are complied with.

Most EEC member countries require notification before your product may be sold. We advise you to contact the relevant country.

Variants and Ordering information

The TX2 transmitter and RX2 receiver are manufactured in several variants

Frequencies   418.00 MHz for UK use
                       433.92 MHz for UK & European use

Supply voltage 5V   (4V to 6V TX2 & RX2)
                  3V   (3V to 4V for RX2, 2.2V to 4V for TX2)

RX data rate: -A, 7kHz baseband BW, slow data upto 14kbps
               -F, 20kHz baseband BW, fast data upto 40kbps

RX data rate applies to receivers only, the TX2 will handle fast or slow data.

The following are standard:

TX2-433:	433.92 MHz , 5V TX , +9dBm
TX2-418:	418.00 MHz , 5V TX , -6dBm
RX2-433-A:	433.92 MHz , 5 volt RX , 14kbps
RX2-433-F:	433.92 MHz , 5 volt RX , 40kbps
RX2-418-A:	418.00 MHz , 5 volt RX , 14kbps
RX2-418-F:	418.00 MHz , 5 volt RX , 40kbps

3V versions of the above are available and should be ordered with a -3V suffix on the part number. (e.g. RX2-433-A-3V is set-up for 3V to 4V operation)
